Summary of Alerts

Nível de Risco	Number of Alerts
Alto	0
Médio	11
Baixo	8
Informativo	12

Alertas

Nome	Nível de Risco	Number of Instances
Application Error Disclosure	Médio	963
Ausência de tokens Anti-CSRF	Médio	3
CSP: Wildcard Directive	Médio	18
CSP: script-src unsafe-eval	Médio	18
CSP: script-src unsafe-inline	Médio	18
CSP: style-src unsafe-inline	Médio	18
Content Security Policy (CSP) Header Not Set	Médio	1042
Hidden File Found	Médio	1
Missing Anti-clickjacking Header	Médio	989
Navegação no Diretório	Médio	1073
Vulnerable JS Library	Médio	3
Cookie No HttpOnly Flag	Baixo	1
Cookie without SameSite Attribute	Baixo	1
Cross-Domain JavaScript Source File Inclusion	Baixo	2
Divulgação de Data e Hora - Unix	Baixo	22
Divulgação de informações - Mensagens de Erro de Depuração	Baixo	6
Private IP Disclosure	Baixo	6
Server Leaks Version Information via "Server" HTTP Response Header Field	Baixo	1427
X-Content-Type-Options Header Missing	Baixo	1249

Authentication Request Identified	Informativo	9
CSP: X-Content-Security-Policy	Informativo	18
CSP: X-WebKit-CSP	Informativo	18
Content-Type Header Missing	Informativo	141
Divulgação de Informações - Comentários Suspeitos	Informativo	148
GET for POST	Informativo	1
Information Disclosure - Sensitive Information in URL	Informativo	15
Modern Web Application	Informativo	46
Obsolete Content Security Policy (CSP) Header Found	Informativo	18
Session Management Response Identified	Informativo	33
User Agent Fuzzer	Informativo	1746
User Controllable HTML Element Attribute (Potential XSS)	Informativo	81

Alert Detail

Médio	Application Error Disclosure
Descrição	This page contains an error/warning message that may disclose sensitive information like the location of the file that produced the unhandled exception. This information can be used to launch further attacks against the web application. The alert could be a false positive if the error message is found inside a documentation page.

Solution	Review the source code of this page. Implement custom error pages. Consider implementing a mechanism to provide a unique error reference/identifier to the client (browser) while logging the details on the server side and not exposing them to the user.

Médio	**Ausência de tokens Anti-CSRF**
	Não foram localizados tokens Anti-CSRF no formulário de submissão HTML. Uma falsificação de solicitação entre sites (Cross-Site Request Forgery ou simplesmente CSRF) é um ataque que envolve forçar a vítima a enviar uma solicitação HTTP a um destino alvo sem seu conhecimento ou intenção, a fim de realizar uma ação como a vítima. A causa implícita é a funcionalidade do aplicativo usando ações previsíveis em URLs /formulários, de maneira repetível. A natureza do ataque é que o CSRF explora a confiança que um site tem em um usuário. Em contrapartida, um ataque do tipo Cross-Site Scripting (XSS) explora a confiança que um usuário tem em um site. Como o XSS, os ataques

Descrição	CSRF não são necessariamente entre sites, mas também podem ser. A falsificação de solicitação entre sites também é conhecida por "CSRF", "XSRF", "one-click attack", "session riding", "confused deputy", e "sea surf". Os ataques CSRF são efetivos em várias situações, incluindo: * - A vítima tem uma sessão ativa no site de destino; * - A vítima está autenticada por meio de autenticação HTTP no site de destino; * - A vítima está na mesma rede local do site de destino. O CSRF era usado principalmente para executar ações contra um site-alvo usando os privilégios da vítima, mas técnicas recentes foram descobertas para vazamento de informações obtendo acesso às respostas. O risco de vazamento/divulgação não autorizada de informações aumenta drasticamente quando o site de destino é vulnerável a XSS, porque o XSS pode ser usado como uma plataforma para CSRF, permitindo que o ataque opere dentro dos limites da política de mesma origem.

Other Info	Nenhum token Anti-CSRF conhecido [anticsrf, CSRFToken, __RequestVerificationToken, csrfmiddlewaretoken, authenticity_token, OWASP_CSRFTOKEN, anoncsrf, csrf_token, _csrf, _csrfSecret, __csrf_magic, CSRF, _token, _csrf_token] foi encontrado nos seguintes formulários HTML: [Form 2: "input_go" "input_password" "input_username" "route" "server" "set_session" "token"].
Instances	3
	Fase: Arquitetura e Design. Use uma biblioteca verificada ou framework que não permita que essa vulnerabilidade ocorra, ou forneça construções/implementações que tornem essa vulnerabilidade mais fácil de evitar. Por exemplo, use pacotes anti-CSRF, como o OWASP CSRFGuard. Fase: Implementação.

Solution	Certifique-se de que seu aplicativo esteja livre de problemas de cross-site scripting (XSS), porque a maioria das defesas CSRF pode ser contornada usando script controlado por invasor. Fase: Arquitetura e Design. Gere um número arbitrário de uso único e exclusivo (ou Nonce = "N" de "number" - número em inglês - e "once" de "uma vez" também em inglês) para cada formulário, coloque o nonce no formulário e verifique-o ao receber o formulário. Certifique-se de que o nonce não seja previsível (CWE-330). Observe que isso pode ser contornado usando XSS. Identifique operações especialmente perigosas. Quando o usuário realizar uma operação perigosa, envie uma solicitação de confirmação separada para garantir que o usuário pretendia realizar aquela operação. Observe que isso pode ser contornado usando XSS. Utilize o controle ESAPI Session Management. Este controle inclui um componente para CSRF. Não use o método GET para qualquer solicitação que acione uma mudança de estado. Fase: Implementação. Verifique o cabeçalho HTTP Referer para ver se a solicitação foi originada de uma página esperada. Isso pode interromper funcionalidades legítimas, porque os usuários ou proxies podem ter desativado o envio do Referer por motivos de privacidade.

Médio	**CSP: Wildcard Directive**
Descrição	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks. Including (but not limited to) Cross Site Scripting (XSS), and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Médio	**CSP: script-src unsafe-eval**
Descrição	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks. Including (but not limited to) Cross Site Scripting (XSS), and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Instances	18

Solution	Ensure that your web server, application server, load balancer, etc. is properly configured to set the Content-Security-Policy header.
Reference	https://www.w3.org/TR/CSP/ https://caniuse.com/#search=content+security+policy https://content-security-policy.com/ https://github.com/HtmlUnit/htmlunit-csp https://developers.google.com/web/fundamentals/security/csp#policy_applies_to_a_wide_variety_of_resources
CWE Id	693
WASC Id	15
Plugin Id	10055

Médio	**Content Security Policy (CSP) Header Not Set**
Descrição	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross Site Scripting (XSS) and data injection attacks. These attacks are used for everything from data theft to site defacement or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Solution	Ensure that your web server, application server, load balancer, etc. is configured to set the Content-Security-Policy header.
Reference	https://developer.mozilla.org/en-US/docs/Web/Security/CSP/Introducing_Content_Security_Policy https://cheatsheetseries.owasp.org/cheatsheets/Content_Security_Policy_Cheat_Sheet.html https://www.w3.org/TR/CSP/ https://w3c.github.io/webappsec-csp/ https://web.dev/articles/csp https://caniuse.com/#feat=contentsecuritypolicy https://content-security-policy.com/
CWE Id	693
WASC Id	15
Plugin Id	10038

Médio	**Hidden File Found**
Descrição	A sensitive file was identified as accessible or available. This may leak administrative, configuration, or credential information which can be leveraged by a malicious individual to further attack the system or conduct social engineering efforts.
URL	http://vendetudo.com/.git/config
Método	GET
Ataque	
Evidence	HTTP/1.1 200 OK
Other Info	git_dir
Instances	1
Solution	Consider whether or not the component is actually required in production, if it isn't then disable it. If it is then ensure access to it requires appropriate authentication and authorization, or limit exposure to internal systems or specific source IPs, etc.

	Modern Web browsers support the Content-Security-Policy and X-Frame-Options HTTP headers. Ensure one of them is set on all web pages returned by your site/app.

Solution	If you expect the page to be framed only by pages on your server (e.g. it's part of a FRAMESET) then you'll want to use SAMEORIGIN, otherwise if you never expect the page to be framed, you should use DENY. Alternatively consider implementing Content Security Policy's "frame-ancestors" directive.

Baixo	**Cookie No HttpOnly Flag**
Descrição	A cookie has been set without the HttpOnly flag, which means that the cookie can be accessed by JavaScript. If a malicious script can be run on this page then the cookie will be accessible and can be transmitted to another site. If this is a session cookie then session hijacking may be possible.
URL	http://vendetudo.com/admin/
Método	GET
Ataque	
Evidence	Set-Cookie: PHPSESSID
Other Info	
Instances	1
Solution	Ensure that the HttpOnly flag is set for all cookies.
Reference	https://owasp.org/www-community/HttpOnly
CWE Id	1004
WASC Id	13
Plugin Id	10010

Baixo	**Cookie without SameSite Attribute**
Descrição	A cookie has been set without the SameSite attribute, which means that the cookie can be sent as a result of a 'cross-site' request. The SameSite attribute is an effective counter measure to cross-site request forgery, cross-site script inclusion, and timing attacks.
URL	http://vendetudo.com/admin/
Método	GET
Ataque	
Evidence	Set-Cookie: PHPSESSID
Other Info	

Instances	1
Solution	Certifique-se de que o atributo SameSite esteja definido como 'lax' ou, de preferência, 'strict' para todos os cookies.
Reference	https://tools.ietf.org/html/draft-ietf-httpbis-cookie-same-site
CWE Id	1275
WASC Id	13

Solution	Ensure that your web server, application server, load balancer, etc. is configured to suppress the "Server" header or provide generic details.
Reference	https://httpd.apache.org/docs/current/mod/core.html#servertokens https://learn.microsoft.com/en-us/previous-versions/msp-n-p/ff648552(v=pandp.10) https://www.troyhunt.com/shhh-dont-let-your-response-headers/
CWE Id	200
WASC Id	13
Plugin Id	10036

Baixo	**X-Content-Type-Options Header Missing**
Descrição	The Anti-MIME-Sniffing header X-Content-Type-Options was not set to 'nosniff'. This allows older versions of Internet Explorer and Chrome to perform MIME-sniffing on the response body, potentially causing the response body to be interpreted and displayed as a content type other than the declared content type. Current (early 2014) and legacy versions of Firefox will use the declared content type (if one is set), rather than performing MIME-sniffing.

Método	GET
Ataque	
Evidence	
Other Info	This issue still applies to error type pages (401, 403, 500, etc.) as those pages are often still affected by injection issues, in which case there is still concern for browsers sniffing pages away from their actual content type. At "High" threshold this scan rule will not alert on client or server error responses.

Instances	1249
Solution	Ensure that the application/web server sets the Content-Type header appropriately, and that it sets the X-Content-Type-Options header to 'nosniff' for all web pages. If possible, ensure that the end user uses a standards-compliant and modern web browser that does not perform MIME-sniffing at all, or that can be directed by the web application /web server to not perform MIME-sniffing.

Informativo	**CSP: X-Content-Security-Policy**
	Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks. Including (but not limited to) Cross Site Scripting (XSS), and data injection attacks. These attacks are used for everything from data theft to site defacement

Descrição	or distribution of malware. CSP provides a set of standard HTTP headers that allow website owners to declare approved sources of content that browsers should be allowed to load on that page — covered types are JavaScript, CSS, HTML frames, fonts, images and embeddable objects such as Java applets, ActiveX, audio and video files.

Informativo	GET for POST
Descrição	A request that was originally observed as a POST was also accepted as a GET. This issue does not represent a security weakness unto itself, however, it may facilitate simplification of other attacks. For example if the original POST is subject to Cross-Site Scripting (XSS), then this finding may indicate that a simplified (GET based) XSS may also be possible.

Informativo	**Session Management Response Identified**
Descrição	The given response has been identified as containing a session management token. The 'Other Info' field contains a set of header tokens that can be used in the Header Based Session Management Method. If the request is in a context which has a Session Management Method set to "Auto-Detect" then this rule will change the session management to use the tokens identified.

Informativo	User Controllable HTML Element Attribute (Potential XSS)
Descrição	This check looks at user-supplied input in query string parameters and POST data to identify where certain HTML attribute values might be controlled. This provides hot-spot detection for XSS (cross-site scripting) that will require further review by a security analyst to determine exploitability.
URL	http://vendetudo.com/phpmyadmin/index.php?lang=en&route=%2F&route=/&token=27463b437123667e4945225940283837
Método	GET
Ataque	
Evidence	
Other Info	User-controlled HTML attribute values were found. Try injecting special characters to see if XSS might be possible.
